

# Indo-European dialogue on ICT standards & Emerging Technologies

IN THE FRAMEWORK OF

Project

SESEI http://eustandards.in/

(Growth, Profitability & Nation Building)
13-14th March 2014 New Delhi, INDIA

**Machine to Machine Communication Network** 

Presented by Vipin Tyagi , Director , Centre for development of Telematics

#### **Network Evolution**

**Changing Role of Networks** 

Indo-European dialogue on
ICT standards & Emerging Technologies
13-14th March 2014 New Delhi, INDIA

#### The Network evolution continues

Voice oriented to text to video to human oriented computing

Scalability of data network,data storage,and analytics

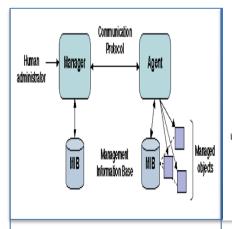

#### New

## **Generation Networks**

The cyberspace to real space

Public network extension to enterprise and home network

#### Future Network Characteristics

Sensor

Managed

Sensor

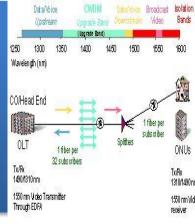

Managed

Managed

Bernent

Actuator

Smart Management

Software oriented

Sensors & Actuators

Remote application

Video based

Decision/ image algorithms

Optical Networks in Access and aggregation

Example: G-PON

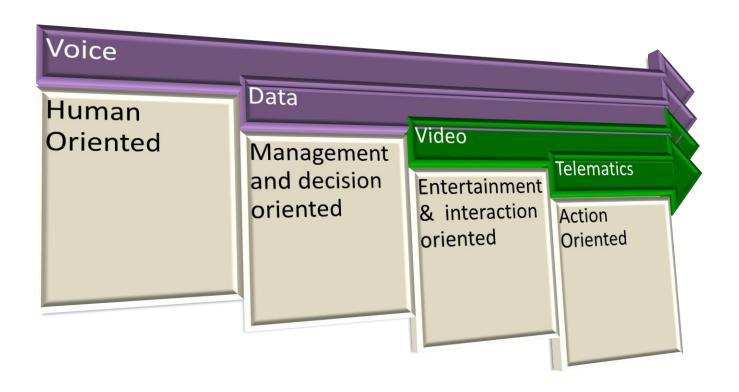

## M2M will have increasingly higher level of implication

# Voice oriented to text to video to human oriented computing

- Camera are having cognitive ability and analysis
- ➤ Microphone is for voice recognition
- > Televisions and displays are getting better then real
- ➤ All most all buttons are having a processors in new generation machines

### The cyberspace to real space

- ➤ Machine to Machine communication
- ➤ Augmented Reality
- > Actuators/Sensors
- ➤ Smart Grid
- ➤ Automotive Telematics

# Third dimesion –the drone Big, Mini , micro

## How much a thermostat and smoke detector startup company is worth?

Google gains entry to home and prized team with \$3.2 billion Nest deal

#### **Security for M2M Networks**

**Actions Orientation has larger security Implication** 

# M2M-It is difficult to find who is who without a systematic regulation?

## Major Security Threats

Vulnerabilities

Telecom
Network &
Services

Threats

Destruction

Corruption

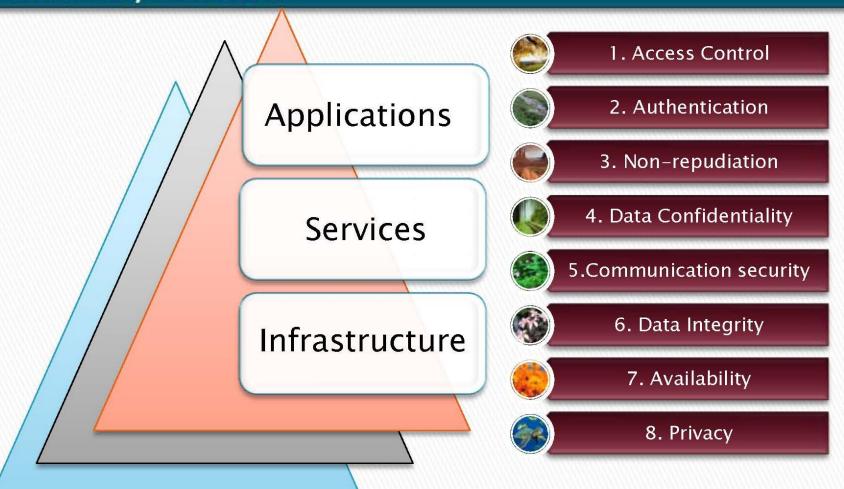

Theft or loss

Disclosure

Interruption

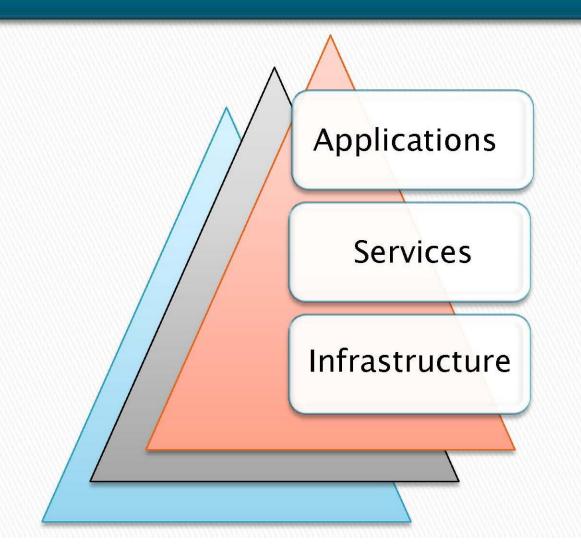

Attacks

# What Security measures to take? 8 Dimensions to protect against all major security threats

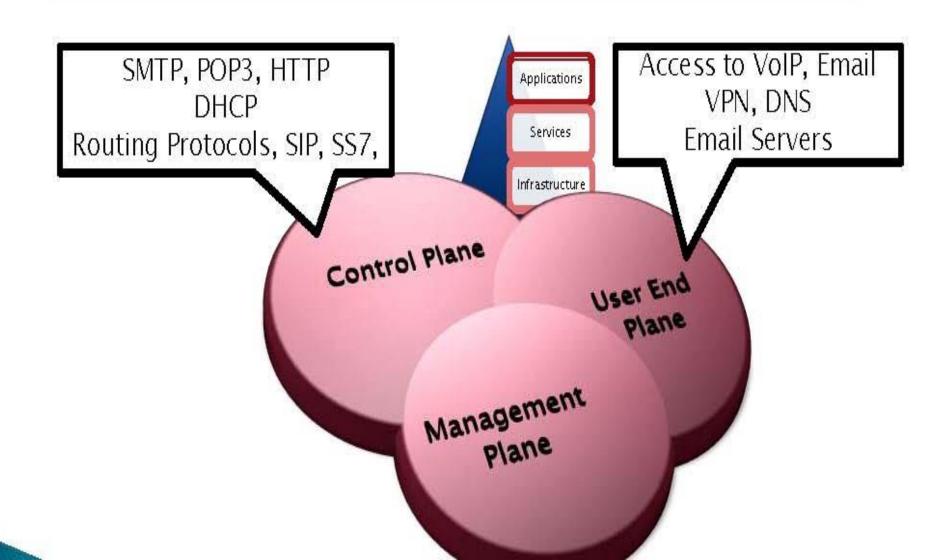

### What to Protect? - 3 Layers

Build on one another

#### Domains of Network activities in 3 Planes

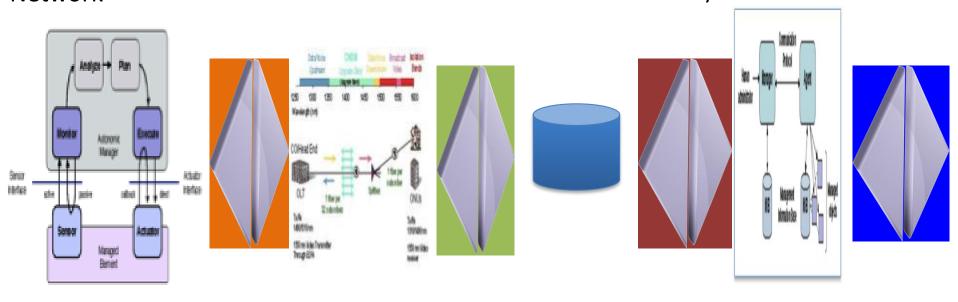

#### 4 Tier Architecture

Sensor Network Tier1
Sensor/Machine control Gateway

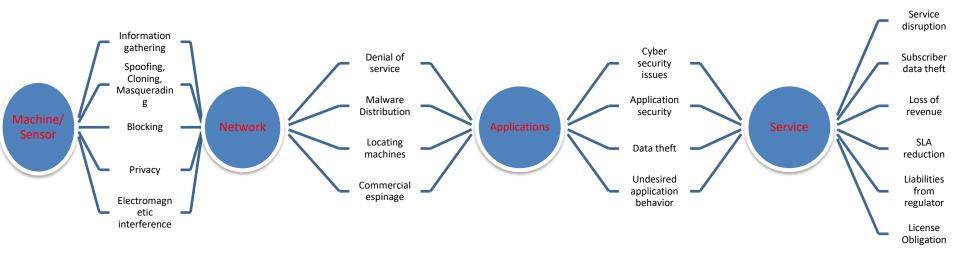

Tier2
IPV6 Network
control Gateway

Tier3
Application control
Gateway

Tier4 service control Gateway

### Security issues

Loss of confidentiality
Loss of data integrity
Loss of data availability
Unintended Action

Disruption of Network Loss of confidentiality Loss of data integrity Loss of data availability Uncontrolled Actions Application Disruption
Disruption of Network
Loss of confidentiality
Loss of data integrity
Loss of data availability
Uncontrolled application Behavior

Loss of revenue
Service Disruption
Business Liability
Legal Obligations
Privacy law
Lawful interception
Public accountability

#### M2M application benefits are path breaking

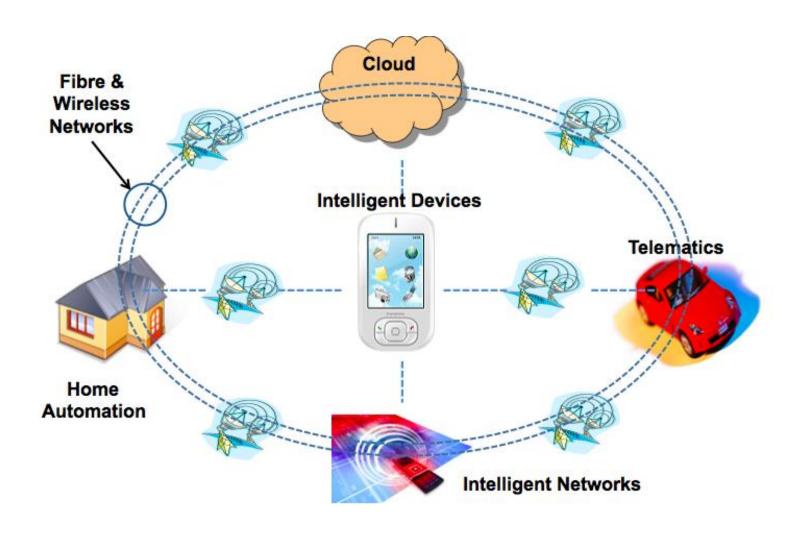

Imagination is more important then knowledge

### Classification of applications/Services

- Enterprise application –within the network limit of enterprise and no connection with other networks
- Public Utility- The application owned, controlled and operated by an entity that is non telecom public utility services
- The Licensed service provider's application/services providing services in license service area
- Defense/Security/Law enforcement agencies applications over dedicated /specialized /public/ networks
- Government Agency's public good applications/Network for various government ministries funded by central or state Government.

### M2M Real Time Always connected

### The applications are numerous

Smart Meters

Advanced Metering Infrastructure

**Home Area Network** 

In Home Display

Demand Management

Energy Use Security Public Safety

Software in the Cloud Remote car control

Cars talking to each other

Cars talking to your Home

In Vehicle displays

**Demand Management** 

Intelligent Transport Infrastructure Traffic Congestion Public Safety Third Party Providers

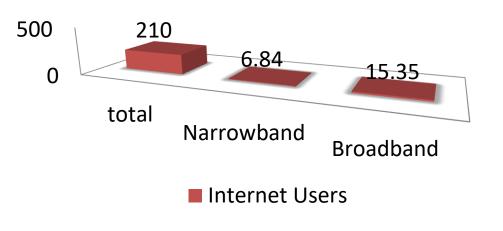

Shared Intelligent Networks Providing Resilience

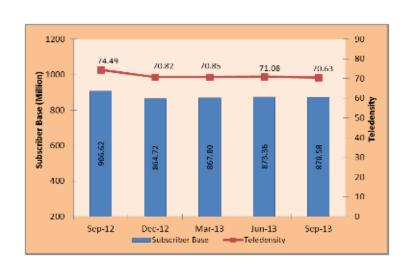

# Innovation and not imitation -New Way forward

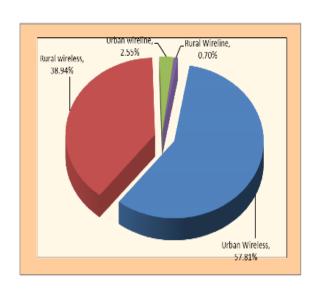

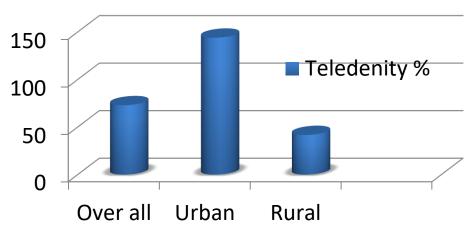

- Visualise Brick&Mortar to online shift
- Analyse regional preferences
- Look at the new value proposition
- Aggregation and distribution opportunity
- Indian Solution to Indian problems

### Rural India is catching on Internet

# Smart Villages – Optimization of farming inputs

- Through measurement, observation advise and correction in real time interactive
  - Fertilizers
  - Pesticide
  - Water
  - Tilling
  - Seed
  - Farm protection

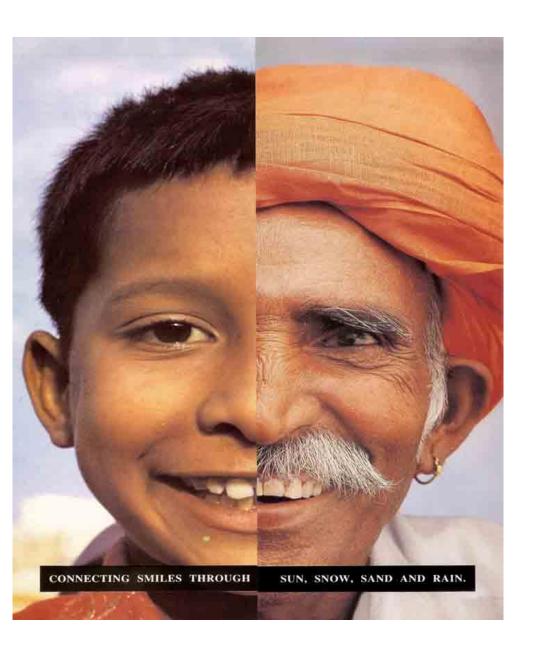

Payment
Advance
Insurance/Assurance
Subsidy transparency
Loan transparency

#### **Conclusion**

- M2M will unlock the true potential of Networking and ICT through innovation and imagination
- M2M will generate new business challenges of security, control and transparency
- Regulation ,policy and standardization challenges are being addressed by various entities
- New Technology development is required for Indian/Developing countries Requirements

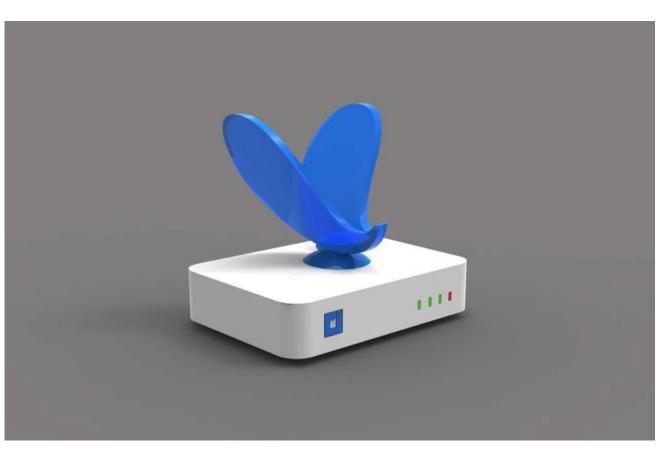

### Thank You

# India has long history of folk entertainment

## The Next thing from CDOT -Titli Damak

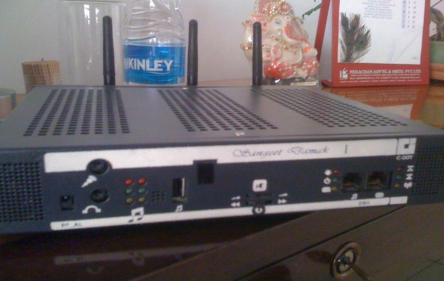

FTTD fiber to the desk Small, beautiful, affordable

- Fiber connected
- 2Ports of 1 Gbps
- Mobile-stand and charger
- > Telephone
- Videophone

This can become gateway for your Super broadband connectivity

# Music Distribution solution in rural village over fiber

Sangeet Damak ONT from C-DOT Wi-Fi POP+2xTelephones +Cable TV+4x100Mbps + 1x1Gbps+FM Trnasmitter+ disaster paging + Music player+internet radio++2xUSB Port+Remote+ feed to stereo+printersharing
