Future of Life... on EARTH...

The EVOLUTION we NEVER EXPECTED

“Nature no longer runs the Earth, we do.”

It has been observed that the technologies developed by human beings in the last 2-3 centuries have had a major impact on the earth's climate and our nature's equilibrium.

Some believe that we have reached a point of no return. This can have a huge impact on *life on earth*, especially on the *human species*.

However, while technology has been responsible for most of it, technology also seems to have a solution for it.

It is increasingly clear that today's environmental conditions are not sustainable. Over the past few decades, we have made huge progress fighting disease, poverty, and illiteracy.

Now we must apply that same ingenuity to the problem of global warming and other consequences of human activity.

Climate is not politically strong enough to fight carbon by itself.

narnix

Smart Cities Mission: Background

IN National Imperatives

- IN To provide a Secure & Sustainable Basic Infrastructure and Environment
- IN To use Smart Solutions to improve the Infrastructure, Services & Quality of Life of its Citizens
- IN To Rely on Area Based Development
- IN To set examples that could be replicated both within and outside the Smart City and catalyze the creation of similar Smart Cities.

Ministry of Housing and Urban Affairs (MoHUA) has created a roadmap highlighting the key **urban development outcomes** it intends to achieve by **2022** and **2024** respectively.

IN Ease of Living

IN Responsive Governance

IN Sustainable Environment

IN Economic Growth

100 Cities

100 Million People

Smart Cities & Smart Infrastructure

A sample Indian business case for next 5-10 years:

- 250 million Smart Electricity Meters are going to be procured & deployed under the NSGM (National Smart Grid Mission).
- All these **Smart Meters** are going to use **250 million Communication Modules** and minimum **0.5 million Gateways/DCUs** (Data Concentrator Units).
- **Smart Streetlights** are going to use more than **100 million Communication Modules** and at least **half a million of DCUs/Gateways...**
- **Smart Buildings** are going to deploy more than **50 million smart Sensors** and at least **100K – 200K DCUs/gateways...**
- **Automobiles** shall be using at least **100-200 million** communication nodes for Vehicle O & M, V to V, V to I & other telematics applications...
- Similarly, various applications of the Smart Infrastructure paradigm like Smart Water, Smart Gas, Smart Traffic, Smart Environment, Smart sewage Disposal etc. are going to use a few billions of Smart Sensors with Communication Modules

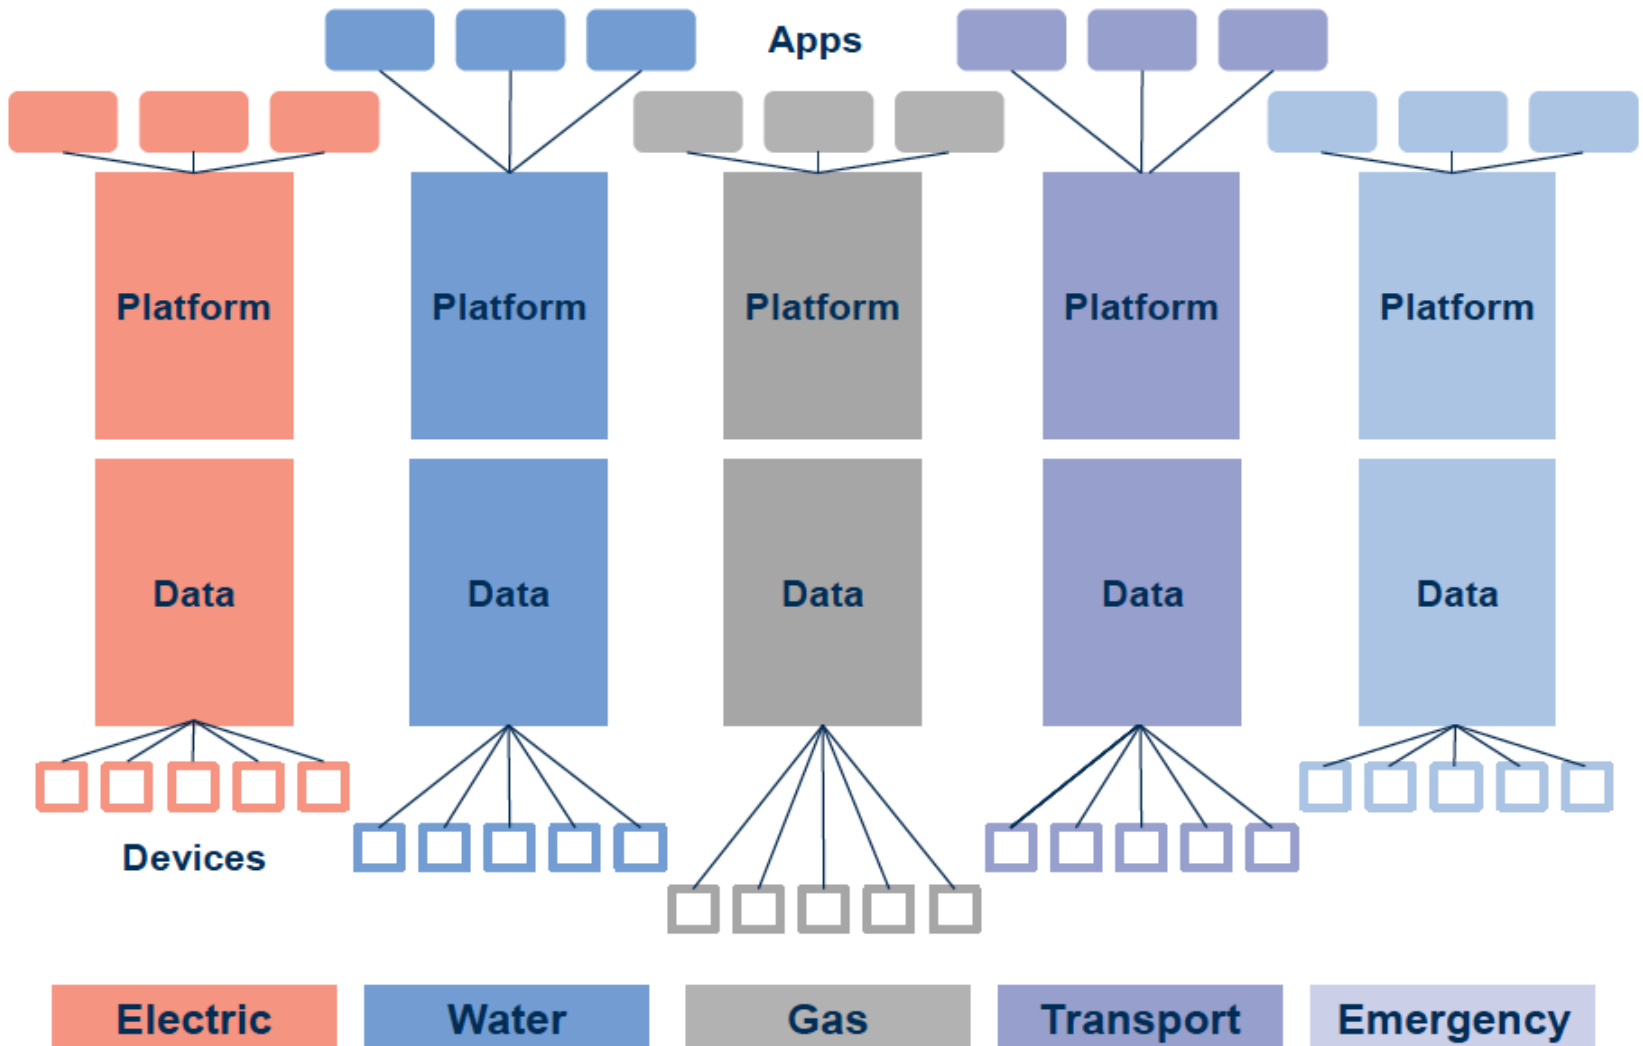

To summarize, India ALONE, is going to need a minimum of **5 - 10 billion Communication modules** to be integrated into the Smart Sensors and Controllers and **10– 50 million Gateways** that shall be needed to operate and maintain the **Nation-Wide Critical Infrastructure** that needs to be deployed to enable and empower the citizens to lead a sustainable, safe and secure life ...

CLASSIC SAUCER CHAMPAGNE GLASS ARCHITECTURE MODEL

namix

4th Indo-European Conference
on Standards & Emerging Technologies

7th December 2023 | The LaLiT, New Delhi, India

Unified Digital Infrastructure: Reference Model

The evolved Comprehensively Unified ICT Architecture can be modelled as a “Classic Saucer Champagne Glass” with a wide Flat Bottom Base depicting the multitude of Field Devices & sensors etc. The Saucer Shaped Bowl on the Top depicting being filled with an ever-increasing spectrum of City Applications and Citizens’ Services.

The Long Stem depicts all the Common Layers viz.: the Unified Last Mile Communication, Common Standardized Gateways (application or Vertical Agnostic), Common Service layer representing the Common Service Functions in the Gateways, as well as, in the Cloud... and the Smart City Middleware & City Data Reservoir in the Cloud.

It is the “Long Stem” of the “Champagne Glass Model” instead of the Short & Narrow Neck in the “Hourglass Model” that brings the comprehensive harmonization, standardization & interoperability in the Architecture leading to optimization in operational efficiency & Life Cycle Cost of the ICT Infrastructure in any Smart City.

This Architecture Model, beyond reducing significantly, the CAPEX, OPEX & Carbon Footprint of the Digital Infrastructure, enables a unified & well architected Infrastructure that can be easily designed to be comprehensively Resilient & Cyber Secure.

A major Gap...

It is evident that there is Glass Wall Barrier between the Communication Protocols & Standards for IoT applications and that for Infrastructure & Industrial popularly called OT applications. In spite of evident appreciation of strengths and weaknesses of both classes of standards, there has been NO initiative by any Global SDO or Industry Consortia.

This exercise is an effort in this direction with intent to break the Glass Wall Barrier and homogenize these Two siloed paradigms comprehensively by developing a Unified Last Mile Communication Protocol Stack Architecture leveraging the best of both the worlds and developing a Communication Technologies agnostic robust Stack Architecture that shall enable ubiquitous Data sharing seamless across domains, use cases and applications.

Intended Outcomes / Changes / Benefits

To meet the vision of “Sustainable Digital Transformation of the Urban Landscape” in India, Bureau of Indian Standards (the National Standards Body of India) constituted a Sectional Committee LITD 28 on Smart Infrastructure in 2017 based on learnings and recommendations of the [Pre-standardization Study Report - Technical Requirements Analysis of Unified, Secure & Resilient ICT Framework for Smart Infrastructure](#). This Committee is developing a Series of System Standards (IS 18000 to IS 18100) to address the gaps and challenges in the Smart Cities’ Digital Infrastructure (including Critical/Civic Infrastructure) domain, Operations & Governance. First Ten Standards have already been released in December 2020 and June 2021:

- ⇒ IS 18000:2020 – Unified Digital Infrastructure – ICT Reference Architecture (UDI-ICT RA)
- ⇒ IS 18002-1: 2021 – Unified Digital Infrastructure — Data Layer Reference Architecture
- ⇒ IS 18003-1: 2020 – Unified Data Exchange Part 1 Architecture
- ⇒ IS 18003-2: 2021 – Unified Data Exchange - API Specifications
- ⇒ IS 18004-1: 2021 – Unified Digital Infrastructure - IoT System Reference Architecture
- ⇒ IS 18006-1: 2021 – Municipal Governance Reference Architecture
- ⇒ IS 18006-3-1: 2021 – Municipal Governance – Property Tax – Taxonomy
- ⇒ IS 18008-1: 2021 – Smart Cities GIS Reference Architecture
- ⇒ IS 18010-1: 2020 – Unified Digital Infrastructure – Unified Last Mile Communication Protocol Stack Part 1 Reference Architecture (UDI – ULMCPS – RA).
- ⇒ IS 18010-5-1: 2020 - Unified Digital Infrastructure – Unified Last Mile Communication Protocol Stack Part 5 Network Access Layer (IEEE 802.15.4) Section 1 Specification

The BIS Standards referred above are available in the following link:

Good Practices

Based on the initial set of System Standards already published, cities are being encouraged to update their respective Deployment strategies by including these standards in the future Solutions' RFPs. The various Guidelines, Indices and Maturity & Assessment Frameworks are being re-calibrated to ensure compliances to the standards.

The Technology Products, Systems & Solutions providers are aligning their respective offering to comply to the published standards. These standards have enabled the Sustainable Digital Transformation of the Urban Landscape by enabling optimization of the Digital Infrastructure in a Technology agnostic & Vendor Agnostic manner opening the floodgates of structured innovation by the Academia, Researchers, Start-ups, and industry at large.

The initiatives have created a healthy competitive environment for the industry with level-playing field for big and small enterprises leading to new synergies amongst innovators/start-ups and large organization to collaborate to develop new Standards based Technology Solutions for Smart Cities.

These Standards have been developed in accordance with principles laid out in the IEC SRD 63188 - Smart Cities Reference Architecture Methodology (SCRAM) & IEC 63205 – Smart Cities Reference Architecture (SCRA). These Standards are being developed under IEC Systems Committee Smart Cities.

narnix

Lessons learned

These standards shall help bring the Lifecycle cost of the Digital Infrastructure down substantially because of standards based Interoperable system components available through multiple vendors along with making it Resilient and Cyber Secure & Trustworthy.

The 100 Smart cities acting as the living lab and Test Beds for innovation have provided a vast body of knowledge base and actionable insights to the City Planners, Administrators, Technology Solutions Providers & Deployers to bring a comprehensive homogeneity in the heterogenous & fragmented ecosystem.

However, it is still 'work in progress' and continuous new learnings are being imbibed to leverage in updating the National Standardization Strategy and Roadmap for the "Sustainable Digital Transformation of the Urban Landscape" in India.

narnix

Rethinking Smart Cities: Prioritising Infrastructure

- The premise of a smart city has evolved from a technology-centric project to one that leverages technology to create a sustainable and citizen-centric environment.
- It is no longer enough simply to deploy sensors - companies and governments need to demonstrate a meaningful impact on the population.
- Keeping pace with the challenges presented by COVID-19, escalating sustainability commitments and ongoing population growth will require unprecedented urban investment and innovation.
- We see digital infrastructure as pivotal to the Smart City evolution.

Some insights from current imperatives...

- What is the city but the people?
- Cities are where problems and solutions meet...
- Urbanisation is bound to alter the ecological balance
- We shape our cities, thereafter they shape us.....
- Cities are where the climate change battle will be primarily won or lost.
- TO REBUILD OUR FUTURE - CITIES NEED TO NURTURE THE NATURE
- One Planet to Share: Sustaining Human Progress in a Changing Climate

One earth, One family, One future
